OIL WORLD Weekly

World Supply, Demand and Price Forecasts for Oilseeds, Oils and Meals

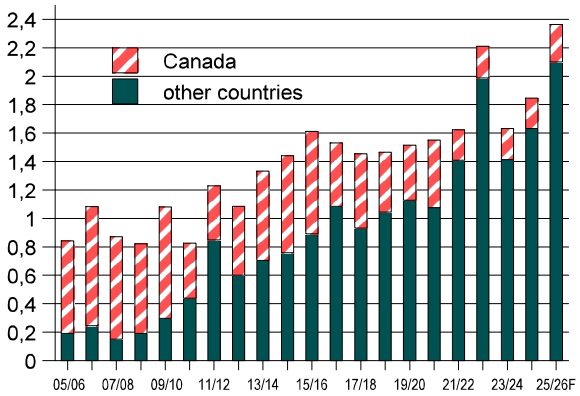
C 26193

No. 18 Vol. 69 30 April 2026

Highlights of this Issue

● **World exports of linseed are now estimated to approach a record 2.4 Mn T this season, driven by large crops in Kazakhstan and Russia as well as huge Chinese imports.**

LINSEED World Exports (Mn T)



● **World usage of rapeseed meal reached a new high of 23.5 Mn T in Oct/March 2025/26 with most of the increase in the EU-27.**

● **We estimate Pakistani soya meal consumption at around 2.4 Mn T in Oct/Sept 2025/26, up from 1.4 Mn T each in the preceding two seasons, facilitated by booming soybean imports.**

● **World exports of olive oil reached a record level of an estimated 0.76 Mn T in Oct/March 2025/26, up 12% on the year.**

ALL ITEMS AT A GLANCE

LINSEED & FLAXSEED: Record crops in Kazakhstan and Russia are seen boosting world exports of linseed by 0.5 Mn T or 29% in Aug/July 2025/26. China has further increased its market this season and we expect imports to reach a new high of 1.24 Mn T Aug/July 2025/26, driven by rapidly rising domestic demand of linseed oil. More details on SU 12-17/18. (196)

PAKISTAN: Imports and processing of soybeans have continued to increase sharply so far this season, establishing the basis for the further sizable growth of soya meal consumption, primarily driven by increasing demand from the expanding poultry industry. Latest trade statistics on SU 24-59. (197)

Biofuel: Reduced domestic soya oil supplies and lack of foreign demand kept Argentine biodiesel production subdued at 68 Thd T in March.

Brazilian production of biodiesel increased by 9% on the year in March and 10% in Jan/March 2026. (197)

Soya meal: Reports of Argentine soya meal being rejected in the EU after a GM soybean variety not authorized under EU regulations had been detected have put market participants on edge, at least temporarily raising demand for US origin. (198)

Rapeseed meal: Rising domestic output as well as sharply higher imports (primarily from Canada) have raised EU rape meal usage to an estimated 7.8 Mn T in Oct/March 2025/26 (up 0.9 Mn T). (198)

Olive oil: World exports reached a new high in the first six months of the 2025/26 season. Tunisia boosted exports by 60% to a new high of 274 Thd T in Oct/March 2025/26, confirming this season's large production. (198)

Groundnuts: Global trade flows have changed so far this season with Chinese net exports of groundnuts surging to 232 Thd T in July/March 2025/26, contrasting with net imports of 51 Thd T in the comparable period a year ago. (199)

Spain: Imports of rapeseed oil remained high in early 2026 and quadrupled to 177 Thd T in Oct/Febr 2025/26 (compared with 42 Thd T), driven by strong demand from Spanish biofuel producers. (SU 17-27 and 199)

Kazakhstan: Sunflowerseed crushings are estimated to reach a record 2.12 Mn T in Sept/Aug 2025/26 (up 27% from a year earlier), raising export supplies for sunflower oil and meal. (200)

Russia: Exports of oilseed meals increased by 0.2 Mn T on the year and approached 2.5 Mn T in Oct/March 2025/26, with China the key destination. (200)

Egypt: Booming imports and crushings of soybeans have resulted in a growing exportable surplus of soya oil of late. (200)

Rep. South Africa: Record crops should facilitate a further increase of South African oilseed processing in 2026/27, limiting import requirements of vegetable oils and oilmeals. (200)

Canada: Canola crushings increased to 1.1 Mn T in March, up 7% from a year earlier and only marginally below the all-time high registered in Oct 2024. (201)

U.S.A.: Soybean export sales for 2025/26 declined by 6% from a year earlier to 1.17 Mn T in the four weeks to April 23, while foreign demand for US soya meal continued to grow. (201)

China: Imports of 7 veg. oils and 5 oilmeals remained unusually high in March and increased by 0.9 and 1.5 Mn T, respectively, from a year earlier in Oct/March 2025/26. More details on SU 24-60. (201)

Japan: Soybean crushings were again comparatively high in March at 226 Thd T and amounted to 1.28 Mn T in Oct/March, up 7%. (SU 25-33 and 202)

Sri Lanka: Imports of four major veg. oils declined by more than one quarter in Oct/March 2025/26, with the severe decline of coconut oil imports and lower arrivals of palm oil only partly offset by the pronounced uptrends in palmkernel oil and sunflower oil. (202)

Thailand: The Thai government has announced to control palm oil exports to preserve sufficient supplies to satisfy demand from the food sector and biodiesel producers. (202)

Türkiye: Imports of sunflowerseed and sun oil were unusually high at 192 and 143 Thd T in March, compared with 162 and 93 Thd T, respectively, a year earlier. (203)

United Arab Emirates: Iran war has also halted imports of rapeseed & canola into the UAE as well as the processing and exports of the products in recent weeks. We expect exports of rapeseed oil and meal from the UAE to decline sharply in Apr/June 2026. (203)

PRICES

Insufficient Domestic Supplies Sparking a Rally in US Soya Oil Prices

Political uncertainty likely to remain high in May, setting the stage for volatile commodity markets and complicating the transition from old- to new-crop supplies in the major oilseeds.

Hopes for peace deal between the US, Israel and Iran, required for trade of mineral oil, natural gas and fertilizer through the Strait of Hormuz to resume, have diminished in recent days, raising the likelihood of further tightening global supplies. Nearby prices of Brent closed at 118.03 on April 29, up 16% from a week earlier and a new contract high for the June position. But is the current price level already high enough to sufficiently ration demand if a political solution is not found soon? Probably not.

Is the current inverted price structure of the mineral oil market, with the nearby Brent oil contract trading at a premium of $ 29 per barrel over the Nov contract, therefore mainly reflecting the need to ration demand in the nearby and does not (yet) imply an easing of the shortage?

While by far the most concerning, the Iran war is not the only political factor that is affecting commodity markets at the moment. Announcements of further rising biofuel mandates in the US, Indonesia, Thailand (see below) and to a certain extent also in the EU have contributed to the strength in vegetable oil prices in April. The OIL WORLD price index for edible oils increased to 211 points this month, implying that vegetable oil prices (weighted by their share in world exports) are currently more than twice as high as the average for the month in the five years to 2019.

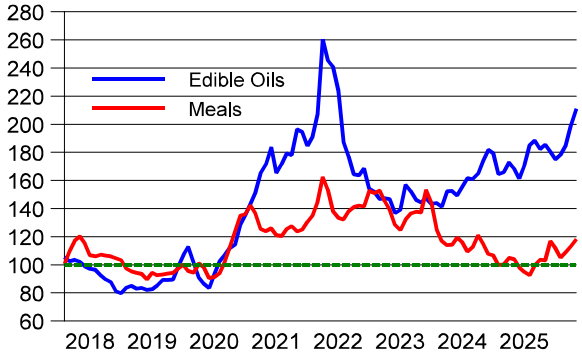
However, the increase in US soya oil prices was even higher. Soaring demand from domestic biofuel producers sparked a rally in soya oil prices in Chicago, with the May position closing at a new contract high of 75.31 c/lbs on April 29, up 5.1% from a week earlier and around 65 cents in mid-March. The market is apparently coming to the realisation that domestic supplies of oils and fats will be insufficient to reach the required biofuel volume set by the RFS for 2026, making soaring price premiums vis-a-vis the world market inevitable.

South American soya oil is currently offered at discounts of more than 2000 points below the respective futures contract on the CBOT compared to parity or even slight premiums at the start of the year, illustrating the decoupling of the US from the world market.

In the EU, supplies of key commodities, viz. soya meal and sunflower oil, are currently at risk due to regulatory concerns, exposing consumers to higher prices. Reports of Argentine soya meal being rejected in the EU after a GM soybean variety not authorized under EU regulations had been detected have put market participants on edge, at least temporarily raising demand for US origin. While raising the margins for US soybean crushers even further, there is great concern that the situation – unless resolved soon – will severely disrupt global trade flows of soya meal and may even curb Argentine soybean crushings below potential in coming weeks.

Monthly OIL WORLD Price Indices

5-year average 2015-2019 = 100



January 2018 until April 2026

At the same time, entry barriers on Russian (prohibitively high import duties) and Argentine (sanitary and phytosanitary compliance issues) sunflower oil, have kept EU supplies tight and prices at a sizeable premium over the world market.

Market participants in the EU are now also closely monitoring weather developments in the key rapeseed producing regions. In its latest MARS report released on April 27, the EU Commission raised the forecast for average EU rapeseed yields by 1% to 3.25 T/ha, citing generally favourable crop conditions. However, dryness in parts of Germany, Poland, Hungary, the Czech Republic and the Baltics are reason for concern, potentially curbing yields below current expectations.

The other major price-determining factor for the rapeseed market is the prospective demand increase for rapeseed oil from EU biofuel producers. Following the escalation of the Iran war and the corresponding rally in energy prices, blending margins – at least on paper – already improved sizeably in the past 6-8 weeks. New-crop rapeseed prices on the Matif (Nov position) reached a new contract high of EUR 524.0 at the close of April 29, up 3.7% on the week and 20% above Jan 2, 2026.

Fish oil prices rallied by 12-14% on the world market in the week to April 29. There is now an increasing risk that world supplies will turn out even smaller than initially expected in April/Sept, leaving buyers scrambling to cover their requirements. Peruvian export prices jumped to US-$ 4500 this week, up sharply from $ 3550 in Jan 2026 and only $ 2600 in April 2025. Dmi

FORECASTS

World Exports of Linseed to be Boosted by 0.5 Mn T or 29% in Aug/July 2025/26

Most of the record crops in Kazakhstan and Russia rapidly disposed of

World exports of linseed were boosted by 0.5 Mn T or 40% from a year earlier in Aug/March 2025/26 and are now estimated to approach a record 2.4 Mn T in the full season compared with 1.84 Mn T in Aug/July 2024/25. This is occurring on the back of very large crops of 1.35 Mn T in Kazakhstan and of close to 1.4 Mn T in Russia. These two countries are expected to export a combined 2.0 Mn T of linseed this season, equivalent to 84% of world exports.

LINSEED & FLAXSEED: World Exports (1000 T)

	August/July				
	25/26F	24/25	23/24	22/23	21/22

Total	**2372***	**1838**	**1780**	**2070**	**1589**

(a) Intra-EU trade excluded.

The Canadian share of world exports diminished in recent years and will reach only about 7% this season. Canadian flaxseed exports amounted to 144 Thd T in Aug/Febr 2025/26, of which 55 Thd T to the USA, 33 to China and 32 Thd T to the European Union. (For details see SU 12-17.)

Kazakhstan, Russia and Ukraine substantially increased exports of linseed to 1.6 Mn T in Aug/March 2025/26, a record volume and 0.5 Mn T above a year earlier. China accounted for 58% of the total so far this season. Kazakhstan and Russia exported a combined 0.94 Mn T of linseed to China in Aug/March 2025/26, 0.3 Mn T more than a year earlier.

The European Union also raised purchases of linseed. Kazakhstan exported 404 Thd T to the EU in Aug/March 2025/26, Russia 85 Thd T and Ukraine 26 Thd T, bringing the total to 515 Thd T in the first 8 months of this season compared with 377 Thd T a year earlier.

LINSEED : Exports of 3 Countries (1000 T)

Pakistan. . .	.	1	5	6	2
Türkiye. . . .	4	4	13	8	10

Chinese imports of linseed & flaxseed were huge at 185 Thd T in December 2025, followed by arrivals of 208 Thd T in January, 134 in February and 166 Thd T in March. They may have peaked and are seen declining seasonally for the remainder of this season. In Aug/July 2025/26 we estimate total Chinese imports at 1.24 Mn T compared with 0.91 one year and 0.82 Mn T two years earlier. Crushings in China have been on an uptrend and we assume that they will reach at least 1.2 Mn T this season. No doubt, China has further increased its market this season, driven by rapidly rising domestic demand of linseed oil. So far exports of linseed oil have been very small.

CHINA : Supply & Demand of Linseed (1000 T)

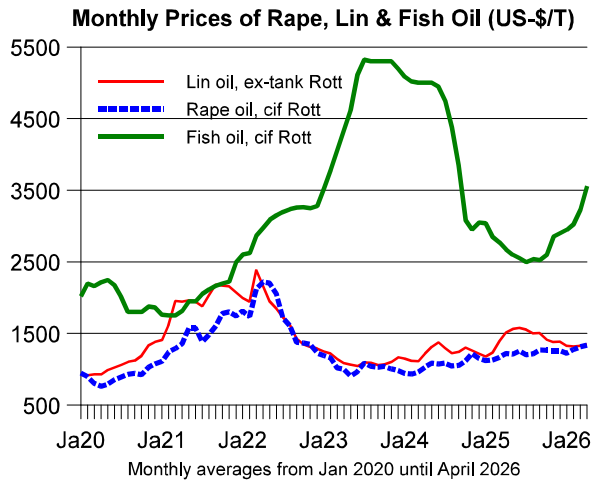
	August/July				
	25/26F	24/25	23/24	22/23	21/22
Op. stocks	150*	200*	300*	35*	60*
Output	200*	230*	230*	240*	340*
Imports . . .	1240*	914	822	1108	499
Exports . . .	1*	1	1	1	1
Crushings .	1200*	1090*	1060*	1000*	800*
Other use. .	119*	104*	91*	82*	63*
End.stocks.	270*	150*	200*	300*	35*

Crushings of linseed & flaxseed are forecast to reach a record 2.83 Mn T in Oct/Sept 2025/26, 0.3 Mn T or 11% above a year earlier. The biggest increase is occurring in China but processing is also rising in the European Union, Russia, the USA, Canada and a few other countries. This includes Afghanistan where imports of linseed more than doubled on the year so far this season and will probably reach 110 Thd T in 2025/26, virtually all of which from Kazakhstan.

Rapid disposals of linseed in the first half of this season and sizably rising exports and crushings absorbed most of the growth of 0.9 Mn T in this season's world production. Still, stocks at the end of this season will be up from a year earlier in Kazakhstan and Russia at an estimated 220 and 187 Thd T, respectively.

World production of linseed oil is seen rising sizably by roughly 90 Thd T or 11%. Linseed oil is currently priced competitively relative to rapeseed oil, fish oil and other oils & fats, which should stimulate demand. The comparatively high content of omega-3 fatty acid is making linseed oil a good substitute to fish oil in the aquiculture industry in Chile, Norway and elsewhere. The tightening Peruvian fish oil export supplies and the latest additional price increase in fish oil should trigger additional demand shifts in favour of linseed oil in

coming weeks. (Our supply & demand estimates are given on 12-17/18.)



PAKISTAN

Imports and processing of soybeans have continued to increase sharply so far this season, establishing the basis for the further sizable growth of soya meal consumption, primarily driven by increasing demand from the expanding poultry industry. The granting of import licenses for GM soybeans has set the stage for booming demand in late 2024. Ample supplies available at relatively low prices on the world market have additionally promoted demand from the Pakistani processing industry.

Trade statistics with breakdown by country are compiled on SU 24–59. Soybean imports more than doubled to a 4-year high of 2.45 Mn T in Jan/Dec 2025 according to official data. Information from the exporting countries had pointed to even larger arrivals. The lower than expected official import numbers may reflect delays owing to the required GM licensing procedure.

The uptrend of Pakistani soybean imports has continued in recent months. Combined soybean exports to Pakistan more than doubled to 2.1 Mn T in Sept/March 2025/26, thereof USA 1.4 and Brazil 0.7 Mn T. Depending on the pace of clearing vessels at ports, imports of soybeans may have approached 3.2 Mn T in May/April 2025/26, almost tripling from the relatively low year-ago level.

This season's US soybean sales to Pakistan were all exported until January while shipments from Brazil have increased seasonally since February.

PAKISTAN : Balance of 7 Major Oilmeals (a) (Thd T)

	October / September				
	25/26F	24/25	23/24	22/23	21/22
Production	**4343***	**3184**	**3051**	**2056**	**3342**

Imports	**88***	**235**	**814**	**310**	**139**
Soya meal	8*	80	658	194	.
Palmkern meal	80*	155	155	113	133
Exports	**132***	**49**	**34**	**55**	**131**
Disappearance	**4300***	**3371**	**3832**	**2310**	**3350**
Soya meal	2360*	1433	1430	578	1477
Cotton meal	924*	1016	1257	707	1095
Rape meal	845*	667	885	808	580

(a) Soya, cotton, sunflower, rapeseed, palmkern, copra, fish.

We estimate Pakistani soya meal consumption at around 2.4 Mn T in Oct/Sept 2025/26, up from 1.4 Mn T each in the preceding two seasons. Ample domestic supplies have brought imports of soya meal almost to a standstill in recent months. The domestic feed market has so far largely absorbed the growth of production, limiting Pakistani soya meal exports to 15 Thd T in 2025.

Consumption of vegetable oils is also increasing sizably this season. This conclusion can be drawn from increasing domestic production, primarily of soya oil and rapeseed oil as well as rising palm oil imports. However, the 10% increase of the latter to 1.86 Mn T in Oct/March 2025/26 resulted also in accumulating palm oil stocks. Furthermore, imports of soya oil dwindled to only 45 Thd T in the first half of this season, versus 207 Thd T a year ago.

Consumption of seven major oils is forecast to increase by 0.3 million to 4.9 Mn T in Oct/Sept 2025/26, thereof palm oil 3.3–3.4 Mn T. The average per capita consumption is seen increasing to a 7-year high of 18.9 kg this season, calculated with UN population data (possibly incomplete). However, it remains to be seen to what extent the recent increase of vegetable oil prices will affect demand.

FACTS & FIGURES

BIODIESEL

Argentina: Reduced domestic soya oil supplies and lack of foreign demand kept Argentine biodiesel production subdued at 68 Thd T in March, limiting the total to 225 Thd T in Jan/March 2026. Exports dropped to only 30 Thd T last quarter while domestic usage recovered to 194 Thd T.

ARGENTINA : Biodiesel Supply & Demand (1000 T)

	Jan/ Mar 2026	Oct/ Dec 2025	July/ Sept 2025	Apr/ June 2025	Jan/ Mar 2025	Oct/ Dec 2024
Production	***225***	***222***	***304***	***246***	***200***	***240***
Exports	*30*	*92*	*151*	-	*31*	*61*

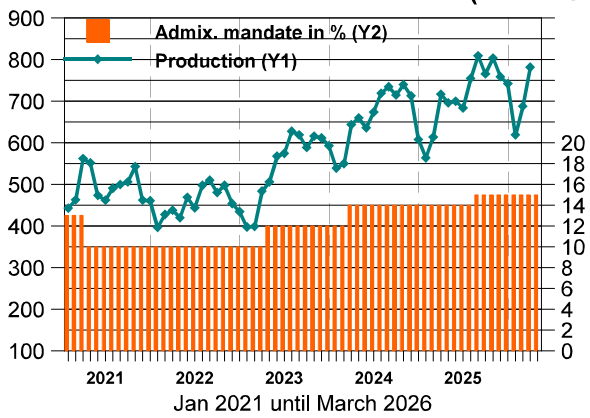
Stocks change	*+1*	*-36*	*.*	*+34*	*-4*	*-3*

Brazil: Production of biodiesel increased by 9% on the year in March and 10% in Jan/March 2026. It reached 2.09 Mn T in the first quarter this year, compared to 1.89 Mn T a year ago.

The production data suggest that biodiesel admixture exceeded the 15% mandate in March, promoted by the improved price competitiveness. This takes the seasonal uptrend of diesel consumption and biodiesel exports of 4 Thd T into account.

BRAZIL: Biodiesel Production (1000 T)



Jan 2021 until March 2026

Canada: Production of biodiesel again sharply exceeded the year-ago level at 108 Thd T in Feb (vs. 34 Thd T a year earlier), bringing the cumulation since Oct to 0.57 Mn T compared to 0.31 Mn T in Oct/Feb 2024/25. This is also reflected in rising Canadian usage of oils and fats in the first five months of the 2025/26 season, with consumption of canola and soya oils up 0.2 and 0.1 Mn T, respectively.

SOYA MEAL

Reports of Argentine soya meal being rejected in the EU after a GM soybean variety not authorized under EU regulations had been detected have put market participants on edge, at least temporarily raising demand for US origin. While raising the margins for US soybean crushers even further, there is great concern that the situation – unless resolved soon – will severely disrupt global trade flows of soya meal and may even curb Argentine soybean crushings below potential in coming weeks.

But how likely is a fast-track approval? According to local observers the volumes involved are very small, but advanced sampling technology and the EU's zero-tolerance policy will cause significant execution problems for new-crop soya meal contracts that are scheduled to be shipped in coming weeks.

Last week we outlined that Argentine soybean crushings are now increasing seasonally, raising export supplies of soya meal correspondingly. Following the seasonal decline to 13.1 Mn T in Oct/March 2025/26, Argentine soya meal exports are currently forecast to recover to around 15.7 Mn T in Apr/Sept 2026. This compares to 15.9 Mn T a year earlier, of which 4.75 Mn T or 30% of the total were shipped to the EU-27.

ARGENTINA : Exports of Soya Meal (1000 T)

	March		Jan/March		Oct/March	
	2026	2025	2026	2025	25/26	24/25

RAPESEED MEAL

Record world crushings of rapeseed & canola are seen lifting rapeseed meal output to a new high of 47.3 Mn T in Oct/Sept 2025/26, up 1.8 Mn T from a year earlier and sharply above the recent five-year average of only 42.0 Mn T.

With processing driven by rising oil demand, crushers (primarily in Canada) have been trying to gain market share in the feed markets in major importing countries via price concessions so far this season. World usage of rapeseed meal is estimated to have increased by 0.6-0.7 Mn T from a year earlier in Oct/Dec 2025. Another increase in the vicinity of 0.2 Mn T likely occurred in Jan/March, bringing the total in the first six months of the 2025/26 season to a new high of 23.5 Mn T (vs. 22.7 Mn T in Oct/March 2024/25).

Most of the year-on-year increase in rapeseed meal usage has taken place in the EU-27 in recent months. Rising domestic output as well as sharply higher imports (primarily from Canada) have raised EU rapeseed meal usage to an estimated 7.8 Mn T in Oct/March 2025/26, up 0.9 Mn T from a year earlier.

In Germany, rapeseed meal usage in compound feed increased by 13% from a year earlier to 1.24 Mn T in Oct/Feb 2025/26, taking market share primarily from soya meal (down 3%) while usage of feed grains increased marginally.

OLIVE OIL

World exports of olive oil probably reached a record level of an estimated 0.76 Mn T in Oct/March 2025/26, up 12% on the year. This reflects sizably higher production in key exporting countries as well as growing import demand in Europe, North America, Asia and some African countries.

The uptrend of demand was favoured by relatively low olive oil prices which declined slightly in Oct/March 2025/26 compared to the year-ago level, contrasting with the uptrend registered in most other vegetable oils.

Tunisia boosted olive oil exports by 60% to a new high of 274 Thd T in Oct/March 2025/26, confirming this season's large production. While the EU remained the key destination, importers in several other countries also took advantage of the large Tunisian export supplies in recent months. (SU 27-56)

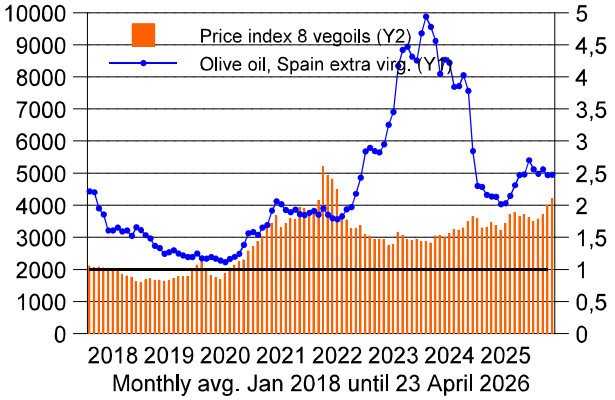
Prices of Olive Oil

In US-$/T. Index: avg 2015-19 = 100



Monthly avg. Jan 2018 until 23 April 2026

In Spain, production and export supplies have been revised upward. Pressed olive oil output exceeded expectations at 82 Thd T in March due to rain-caused harvest delays in preceding weeks. We have now raised our estimate of total Spanish olive oil output by 70 Thd T to 1.37 Mn T, which is still down from last season's 1.54 Mn T.

SPAIN: Pressed Olive Oil & Pomace Oil (1000 T)

	October/September				
	25/26F	24/25	23/24	22/23	21/22

Dom. usage	596*	576*	461*	493*	658*
End. stocks	280*	306*	207*	250*	500*

(a) Intra-trade is included.

Spanish olive oil exports were comparatively high at 100 Thd T in February and reached a 4-year high of 434 Thd T in Oct/Febr 2025/26. This was up 9% on the year, with most of the increase to Italy, Portugal, the USA, China, Mexico, Brazil, South Korea and Japan. For details see SU 17-28.

We estimate total Spanish olive oil stocks to be currently about 0.1 Mn T below a year earlier and anticipate exports to fall below last year's level in the second half of this season.

GROUNDNUTS & OIL

China: Trade flows have changed so far this season with Chinese net exports of groundnuts surging to 232 Thd T in July/March 2025/26, contrasting with net imports of 51 Thd T in the comparable period a year ago. This confirms the sizable increase of domestic production in 2025. However, the gross export volume of 457 Thd T in July/March equates to only about 4% of the Chinese groundnut crop while being relatively large for the world market. China boosted groundnut exports mainly to Indonesia with 90 Thd T (shelled) reported for Jan/March 2026, up from only 15 Thd T a year ago.

Chinese imports of groundnut oil increased by one third on the year to 191 Thd T in Oct/March 2025/26. Brazil garnered market share with a volume of 33 Thd T in Jan/March 2026 (versus 8 Thd T a year ago), followed by India with 23 Thd T (70) and Argentina 15 Thd T (6).

CHINA, P.R.: Exports of Groundnuts (shelled)

in 1000 T	Jan/March		July / March

Total	203	116	457	323	285

Brazil: Harvesting of groundnuts has started in the key producing state of São Paulo. Generally favourable growing conditions are seen resulting in above-average yields. CONAB has recently estimated groundnut production to increase by 4% from last year from an about unchanged area.

Exports of groundnuts and oil were still seasonally low in March at 20 Thd T (16) and 6 Thd T (12), respectively, but are seen gaining momentum from this month onward.

SPAIN

Imports of rapeseed oil remained high in early 2026 and quadrupled to 177 Thd T in Oct/Febr 2025/26 (compared with 42 Thd T), of which 86 Thd T from Ukraine, 22 from Canada, 31 from France and 39 Thd T from other EU member countries. Rapeseed oil has largely been disposed as a feedstock for biodiesel production, partly replacing palm oil, soya oil and UCO. (SU 17-27)

KAZAKHSTAN

Sunflowerseed crushings as well as export supplies of sun oil and meal have again been revised upward, following the release of unusually large export data until March. We now estimate sunflowerseed crushings to reach a record of at least 2.12 Mn T in Sept/Aug 2025/26, implying an increase of around 450 Thd T or 27% from a year earlier. This has been made possible by this season's record crop and a further increase in the domestic processing capacity.

We have raised our estimate on sunflower oil exports to 840 Thd T for Oct/Sept 2025/26 compared with 623 one year and 445 Thd T two years earlier. In the first half of this season exports amounted to 492 Thd T, of which 162 Thd T to China, 232 to Uzbekistan, 45 to Afghanistan and 42 Thd T to Tajikistan.

Exports of sunflower meal were boosted by 107 Thd T from a year earlier in the first half of this season (with China and Uzbekistan the key destinations but only 17 Thd T to the EU). Cumulative exports are now estimated to reach 640 Thd T in the full season compared with 480 and 354 Thd T in Oct/Sept 2024/25 and 2023/24.

RUSSIA

Exports of oilseed meals increased by 0.2 Mn T on the year and approached 2.5 Mn T in Oct/March 2025/26. All of the growth occurred in rapeseed meal and soya meal on the back of larger domestic processing.

China was the key destination. Russian exports of the three major oilmeals to China more than doubled to about 0.74 Mn T in Oct/March 2025/26 compared with 0.34 Mn T one year and 0.23 Mn T two years earlier. Türkiye was the second-largest export destination followed by Belarus, Uzbekistan, Morocco, Egypt, Kazakhstan and Azerbaijan.

Total Russian exports of rapeseed meal and soya meal increased sharply by 65% and 27% on the year in Oct/March 2025/26, while sunflower meal shipments suffered a 10% decline.

EGYPT

Booming imports and crushings of soybeans have resulted in a growing exportable surplus of soya oil of late. Egyptian net exports of soya oil increased to approximately 110 Thd T in Jan/Dec 2025, contrasting with net imports of around 200 Thd T in preceding years (see SU 27-55).

Egyptian crushers exported soya oil primarily to Morocco, Algeria and to several countries in the Middle East.. Some shipments were also destined for Europe and India.

REPUBLIC OF SOUTH AFRICA

Production of oilseeds probably reached a record 4.0 Mn T this season, up from 3.88 Mn T a year and 2.83 Mn T five years earlier. The expected upward

revision of soybean and sunseed production to 2.81 Mn T (vs. 2.80 in 2025) and 0.82 Mn T (0.70), respectively, was confirmed by the Crop Estimates Committee on April 23.

REP. OF S. AFRICA : Sunseed Balance (1000 T)

The large crops should facilitate a further increase of South African oilseed processing in 2026/27, limiting import requirements of vegetable oils and oilmeals. Crushings of the three major oilseeds continued to increase of late and were boosted by more than one quarter on the year to 1.57 Mn T in Oct/March 2025/26, mainly driven by soybeans.

Sunseed processing was supported last quarter by arrivals of 67 Thd T of Argentine sunseed.

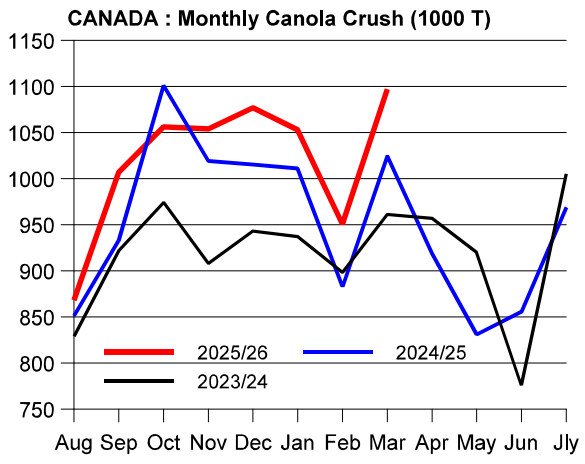
CANADA

Soaring North American vegetable oil prices, high margins and rising domestic processing capacity have lifted Canadian canola crushings to 1.1 Mn T in March, up 7% from a year earlier and only marginally below the all-time high registered in Oct 2024. The cumulation since August reached a record 8.16 Mn T compared to 7.8 Mn T in Aug/March 2024/25.



U.S.A.

Despite recent rains in the US Plains, at least one third of US winter wheat is estimated to be under drought stress. The crop conditions continued to deteriorate in the week to April 26 with 35% of the area in poor or very poor condition compared with 33% a week earlier and 19% at the same time last year, with the worst conditions in Nebraska, Texas, Oklahoma and Kansas.

Spring plantings of grain and oilseed crops are generally well ahead as of April 26, with corn sown on 25% of the intended area in 18 major states (compared with 22% last year and 19% average), soybeans 23% (17 and 12), cotton 16% (14 and 13), sorghum 20% (20 and 19), groundnuts 7 (7 and 6) and spring wheat 19 (28 and 22).

Soybean export inspections declined seasonally to 629 Thd T in the week to April 23 but were again above last year's level. In the latest three weeks, combined soybean inspections of 2.13 Mn T were 0.55 Mn T or 35% above a year earlier, mainly on account of larger shipments to China.

U.S.A.: Soybean Export Inspections (1000 T)

US soybean export sales for the season 2025/26 declined on the week and on the year to 258 Thd T in the week to April 23. They were 6% lower than a year ago at 1.17 Mn T in the most recent four weeks. Undelivered sales diminished further to 6.1 Mn T, still exceeding the low year-ago level.

Foreign demand for US soya meal continues to grow at a robust pace: Export sales amounted to 1.08 Mn T in the past four weeks, up 17% on the year. The biggest sales were registered in the week to April 23 to the Philippines (104 Thd T), Mexico (55) and the Dominican Republic (52).

CHINA, P.R.

Imports of 7 vegetable oils and 5 oilmeals remained unusually high in March and increased by 0.9 and 1.5 Mn T, respectively, from a year earlier in Oct/March 2025/26. This was partly related to the reduced crushings of rapeseed & canola. We also assume that significantly higher palm oil imports were partly used to accumulate reserve stocks.

Imports of soybeans recovered to 42.2 Mn T in Oct/March 2025/26 from 40.3 Mn T a year earlier, of which from Brazil 26.6 Mn T (vs. 17.0 a year earlier),

Argentina 8.7 (2.0), the USA 3.3 (19.2), Canada 1.4 (0.9) and Russia 0.4 (0.2). Imports of rapeseed & canola plummeted to a multi-year low of 0.5 Mn T in Oct/March 2025/26 from 3.05 Mn T a year earlier. Imports of linseed reached a record 870 Thd T in Oct/March. (SU 24-60)

CHINA, P.R.: Imports of 7 Oilseeds (1000 T)

Imports of palm oil were boosted to a 3-year high of 3.0 Mn T in Oct/March 2025/26, of which 0.47 Mn T from Malaysia and 2.47 from Indonesia.

Chinese import requirements of oilmeals have exceeded expectations so far this season. Official customs data confirm another boost in imports of 5 oilmeals by more than 50% from a year earlier to 1.0 Mn T in March. Imports of sunflower meal almost quadrupled to 352 Thd T, of which 233 from Ukraine, 82 from Russia and 37 Thd T from Kazakhstan. The origin countries for rapeseed meal were more diversified with 104 Thd T arriving in March from Russia, 39 from Ukraine, 74 from India, 40 from U.A.E. and 30 Thd T from Canada.

Exports: Chinese exports of soya meal were comparatively small at 36 Thd T in March, almost halved from a year earlier, of which 12 Thd T to Japan and 16 Thd T to the EU.

Exports of soya oil exceeded expectations at 84 Thd T in March (against 19 Thd T a year earlier), of which 37 Thd T to India and 20 Thd T to South Korea. This brought cumulative Chinese exports of soya oil to 571 Thd T in Oct/Mar 2025/26 vis-a-vis 140 Thd T a year earlier.

Exports of used cooking oil picked up to 288 Thd T in March and amounted to 774 Thd T in Jan/March 2026 (compared with 579 a year earlier), thereof 287 Thd T to the EU (compared with 235 a year earlier), 100 Thd T to Canada (against nil) and 66 Thd T to the USA (146). (SU 24-59)

JAPAN

Soybean crushings were again comparatively high in March at 226 Thd T and amounted to 1.28 Mn T in Oct/March, up 7%. Crushings of rapeseed & canola were still 2% down in Oct/March, but processing of all oilseeds reached a 3-year high of 2.58 Mn T, up 2%. Imports of oilseeds and of oilmeals increased from last year in March, while arrivals of oils & fats declined, mainly on account of palm oil. (SU 25-33)

SRI LANKA

Imports of four major vegetable oils declined by more than one quarter in Oct/March 2025/26. The severe decline of coconut oil imports and lower arrivals of palm oil were partly offset by the pronounced uptrends in palmkernel oil and sunflower oil. The preferential import duty on coconut oil was apparently more than outweighed by high world market prices.

Sri Lanka has stepped up imports of sunflower oil primarily from India so far this season, favoured by short transport routes. Preferential import duties on some commodities from India are apparently not applying to sunflower oil according to latest information from Sri Lanka customs.

SRI LANKA: Imports of 4 Veg. Oils

THAILAND

The domestic fuel sector is currently in the process of creating outlets for B20 biodiesel which will be offered as an option besides B7 at stations from May onward, according to the plans of the Thai government. Subsidies will ensure that B20 is sold at discounts to standard diesel to promote demand and reduce costs for the transportation sector.

The Thai government has announced to control palm oil exports to preserve sufficient supplies to satisfy demand from the food sector and biodiesel producers.

In our estimates we are currently assuming that biodiesel will account for roughly 12–14% of total diesel usage from May onward since B20 is not mandatory for all diesel sales. Furthermore we are assuming an at least slight setback of total diesel sales owing to shortages and high prices resulting from the Iran war.

Rising domestic requirements are seen curbing Thai biodiesel exports sizably this year from the record 232 Thd T registered in Jan/Dec 2025.

Under these assumptions, domestic biodiesel production may increase by 0.6-0.7 Mn T to a record 2.2 Mn T this year. Thai palm oil production continued to increase sharply in early 2026 but we expect yields to dwindle in the further course of this year. The demand pull from the energy sector and the announced trade restrictions may curb Thai palm oil exports by approximately 0.5 Mn T. Some rationing of palm oil demand may also be required in the domestic food sector, probably requiring larger volumes of soya oil. Palm oil exports were still outstanding at 330 Thd T in Jan/March 2026, the bulk of it to India (SU 27–55).

TÜRKIYE

Imports of sunflowerseed and sun oil were unusually high at 192 and 143 Thd T in March, compared with 162 and 93 Thd T, respectively, a year earlier.

In Oct/March, sunflowerseed imports more than doubled to 1.13 Mn T (from 437 Thd T a year earlier), of which 574 Thd T from Romania, 352 Thd T from Moldova, 139 Thd T from Bulgaria and 26 Thd T from each Serbia and China. We give details on SU 27-58. Imports of sunflower oil amounted to 143 Thd T in March, of which 82 Thd T from Russia, 43 from Ukraine and 12 Thd T from Romania.

UNITED ARAB EMIRATES

Apart from causing severe disruptions in global trade flows of mineral oil, gas and fertilizer, the Iran war has also halted imports of rapeseed & canola into the UAE as well as the processing and exports of the products in recent weeks.

We expect exports of rapeseed oil and meal from the UAE to decline sharply in Apr/June 2026, keeping the total in the 2025/26 marketing year below potential. Most of the setback is likely to occur in shipments to China, the by far largest destination for both products.

The anticipated decline follows record Chinese imports of rapeseed meal from the UAE in the past twelve months. Arrivals declined marginally from the preceding quarter to 152 Thd T in Jan/Mar 2026 (vs. 113 Thd T a year earlier). Chinese imports of rapeseed oil even reached a quarterly high of 115 Thd T in Jan/March, up more than 70% from a year earlier. We estimate that China accounted for more than 95% of the UAE's total exports of rapeseed meal in Jan/Dec 2025, compared to 86% a year earlier, underscoring its central role in demand.

Escalating trade tensions with Canada and the corresponding setback in Chinese imports of Canadian canola as well as oil and meal are seen as the main reason for the increase. However, China has reopened the door for Canadian canola in early March. Soaring North American vegetable oil prices have additionally raised competition for the remaining canola supplies from the Canadian crush industry. We therefore expect imports and processing in the UAE to decline from a year earlier even if the current blockade of the Strait of Hormuz is lifted.

U.A.E : Imports Rapeseed & Canola (1000 T)
